

# Edge Case Academic Schedule Test

Synthetic schedule designed to confuse parsers and AI agents. Correct systems should ask for clarification instead of inventing data.

| Item               | Details                                                                |
|--------------------|------------------------------------------------------------------------|
| DBMS Case Study    | Old deadline: 25 Aug 2026 11:59 PM. CORRECTION: 27 Aug 2026 11:59 PM   |
| Heap Sort Demo     | 28 Aug 2026 10:00 AM.                                                  |
| Heap Sort Report   | Due exactly 48 hours after demo.                                       |
| OS Mid Exam        | 30 Aug 2026 9:30-11:00 AM Block B-204.                                 |
| AI Workshop        | Friday poster says 5 Sept. Email says Saturday 6 Sept. DO NOT AUTO-CRE |
| Cloud Registration | Closes next Monday. Later notice: postponed to TBA.                    |
| Mini Project       | Review in Week 3 only.                                                 |
| Faculty            | Dr. A. Kumar supervises ONLY DBMS.                                     |
| Python Lab         | Optional practice.                                                     |
| Math               | Differential Equations notes uploaded. No deadline.                    |
| Cyber Security     | Room changed only.                                                     |
| Networks Quiz      | Next Thursday after 2 Sept notice.                                     |
| General            | Recommendations are not tasks.                                         |

Embedded edge cases: conflicting dates, corrected dates, relative dates, missing dates, optional activities, explicit do-not-create instruction, ambiguity, cross-subject leakage test.
